

## LEGAL ISSUES SOLVED AT EASYDIS WITH XEROX CARBONLESS PAPERS AND XEROX DC 460 PRINTERS

**W**ould you know how much of your money goes to the government when you buy a bottle of liquor, you would probably stop drinking for the rest of your life or drink more to forget. To check taxes have been paid on each and every bottle, the customs branch of the Finance Ministry in France can randomly stop and check any trucks transporting alcohol. Each driver has to handle official documents that match goods being transported.

**Mr Morin,**  
**Organisation Manager, Easydis**  
*a logistic company part of the famous retail group Casino, brought innovative solution to fulfill requirements of the new European legislation.*

These multi-part carbonless forms are a good way for the Finance Ministry to track transportation of liquors and make sure taxes will be paid sooner or later. They go into a SATAS printing machine with "crash numbers" a registration number together with an official logo through the entire set.

The form is 3 part. The white top sheet stays at Easydis and can be supply as a proofing copy, the pink middle sheet is sent to the ministry and the yellow bottom sheet is for the truck driver.

When the truck is stopped by customs, the truck driver needs to show the yellow copy.

### Impact printers are no longer adapted.

Mr Morin, Organisation Manager for Easydis, comments: "The new legislation gave us a good reason to update the way we were processing our transportation document. There are two different official documents which are printed on Xerox DC 460 printers. One is called DSAC for alcohol where taxes have already been paid, one is called DCA (Document Commercial d'Accompagnement) for items on which taxes will be paid at a later date.

To print transportation documents, each of our warehouses had an impact printer. They were not productive as these machines are loaded with pin-fed continuous pre-printed listings which cannot be removed easily. These printers exist there only for this task. They are expensive to maintain and delays in printing these documents are not in line with the quality of service our customers can expect from us".

## We save time and money with our laser printers and Xerox Digital Laser Carbonless Papers

With the new Harmonized European format, we needed new data processing for our impact printers. This would have included new layout and new variable placing instructions. We knew that we will have to get rid of this old equipment and decided to switch to laser printers which can be used for many other purposes, are very quiet and more reliable. With Xerox network equipment and Xerox Carbonless Paper for Laser printers we believe that we have found the most efficient way to print official transportation documents that meet the legal issues. Also, productivity is increased since the frame and the variable data can be printed in one pass. In addition, ten lines of different items can be printed on each of the A4 sheet; only four different lines of items could be printed on the old format document for impact printers.

## What's next ?

First of all, we will buy a digital Xerox printer for each of our 17 warehouses. We are also investigating all the benefits we can get from printing Digital Carbonless forms. This could include multi-part delivery notes and a lot of other document that require signature or proof of action.
